

This would be step I
Put the evidence that you believe to have fingerprints inside a fish tank.

Step II
Add super glue to tinfoil container that is inside fish tank and cover fish tank with lid.

Step III
Allow super glue to fume and reform into a solid state.
This allows you to lift print off of the items that had fingerprints.
After the print are collected then using a magnifier you will be able to look at the different characteristics that fingerprints exhibit.
